

Manual Test Guide

No technical knowledge needed — one tester, one laptop, two browser windows. Just follow the steps in order and tick each box. The **Quick check** (steps marked ★) takes about 45 minutes; the **Full check** takes about 2 hours.

Date 2026-09-27 · v0.1.0

Which path? Your lead will tell you: Quick check (★ steps) or Full check (everything)

Stuck? Note the step number, take a screenshot, keep going, report at sign-off

No technical knowledge needed. One tester, one laptop, two browser windows. Just follow the steps in order and tick each box. If anything looks wrong, write down the step number (for example “5.3”) and what you saw — there is a sign-off sheet at the end.

There are two paths: the **Quick check** (steps marked ★, about 45 minutes) and the **Full check** (everything, about 2 hours). Your lead will tell you which one to run.

0. Get ready (10 min, once)

What you need

- ☐ One laptop with a working camera. Use normal room lighting.
- ☐ A phone is handy (QR scan + one face-photo trick) but NOT required — every phone step has a no-phone alternative.
- ☐ A photo of any other person's face on your phone (a friend, family member — anyone who isn't you), or a printed face photo. Needed for step 5.2 only. If you have neither, step 5.2 has a fallback.

Two browser windows — set this up first

- ☐ Window A = LECTURER: your normal browser window. This stays logged in as the lecturer for the whole session.
- ☐ Window B = STUDENT: a private window — Chrome: press Ctrl+Shift+N ("New Incognito window"); Edge: press Ctrl+Shift+P ("New InPrivate window"). This stays logged in as the student.
- ☐ Tip: put them side by side (hold the Windows key and tap the arrow keys) and keep BOTH open the whole time. If you close Window B you will be logged out and must log in again (anything already saved is safe).
- ☐ When the browser asks, ALLOW camera access in Window B (the student needs the camera; the lecturer does not).

Accounts — use the test accounts if you have them

- ☐ If your lead gave you a lecturer login and a student login: log Window A in as lecturer, Window B as student. You are ready — skip to Rules.
- ☐ If you have NO accounts yet, create them now (takes 3 minutes). You need TWO different email addresses (for example your email plus a second one — Gmail trick: name+lecturer@gmail.com and name+student@gmail.com both reach the same inbox).
- ☐ Window A: tap **Register**, choose **Lecturer**, enter the **invite code** from your lead, tick the consent box, tap **Create account**. You should land on the Classes page.
- ☐ Window B: tap **Register**, choose **Student**, enter a **6-digit Student ID** (this can never be changed later, so type it carefully), tick the consent box, tap **Create account**. You should land on the Classes page.

Rules — please read once

- ☐ Do the steps IN ORDER from start to finish. Some steps cannot be undone (for example releasing results), and the order protects you.
- ☐ Only create AI quizzes when the guide says so — each one costs money.
- ☐ Never guess join codes. Too many wrong tries locks everyone out for 15 minutes.
- ☐ Notifications and emails in this test are REAL. That is expected.
- ☐ Name everything starting with **Test** - plus your name and today's date, for example **Test - Ali 27 Sep**. This keeps test data easy to spot.

Phase 1 — Create a class and join it (10 min) ★

Quick check

You play both parts: lecturer in Window A, student in Window B.

- ☐ 1.1 Window A: open **Classes**, tap **New Class / Create class**, name it **Test - \<your name> \<date>**, and open it. — You should see the new class in your list.
- ☐ 1.2 Window A: tap **Show QR**. — You should see a QR code, a join link, and a **Copy link** button. Tap **Copy link** — you should see “Link copied”.
- ☐ 1.3 Window B: paste the copied link into the address bar (OR scan the QR with your phone and log in there as the student). Tap **Join class**. — You should land on the student's Classes page WITH the new class. Open the link again — it should now say you are already enrolled (and NOT add a second copy).
- ☐ 1.4 Window B: tap the **bell** icon. — You should see a welcome message. Tap it — it should open the class. Tap **Mark all as read** — the red count should disappear.
- ☐ 1.5 Window A: create a second throwaway class called **Test - Archive**, then **Archive** it. Window B: refresh your Classes page. — The archived class should be GONE for the student but still visible to the lecturer. Now **Restore** it — it should come back for the student. (You may leave it archived to keep things tidy.)

Phase 2 — Make two quizzes (lecturer, 15 min) ★

Quick check

Window A only. Do NOT tap Publish until step 2.7.

- ☐ 2.1 Create a quiz called **Test - Exam**: type **Assessment**, turn hand gestures **ON**, time limit **15 minutes**. Add 4 questions by hand, one of each type: **Multiple choice**, **True / False**, **Multi-select** (tick several correct answers), and **Short answer** (write a short marking guide when asked). Attach a photo to one question. — All 4 questions should save and show in the list with the photo.
- ☐ 2.2 Tap **Import** and paste in 2 extra questions using the text format shown on screen. — A preview should appear first, then both questions should save.
- ☐ 2.3 Tap **Duplicate / Make a copy** on the Exam quiz. — A copy should appear as a new DRAFT with the same questions and photo.
- ☐ 2.4 Create a quiz called **Test - Practice**: type **Practice**, hand gestures **OFF**, no time limit, turn **ON** “Shuffle question & option order” if you see it. Tap **Generate with AI**: upload one scanned document (a photo of a page works), wait for the text to be read, tap **Generate**, wait for the progress steps, then EDIT one question and **Regenerate** one question. — Edited and regenerated questions should save; the other questions should be untouched.
- ☐ 2.5 Still in the AI window: start one more generation, then tap **Cancel** halfway. — Nothing new should be saved.
- ☐ 2.6 Delete the copy made in step 2.3. — It should disappear. (Quizzes that students already started can never be deleted — that block is correct, do not fight it.)
- ☐ 2.7 Tap **Publish** on BOTH quizzes. On the Practice quiz only, turn **ON** “Release results automatically”. — Both quizzes should show a **Live** tag, and Window B (student) should now show both in the quiz list.

Phase 3 — Practice quiz and share links (student, 10 min) ★

Quick check

Window B only. For the share-link check, Window A (lecturer) plays the part of the recipient — any logged-in user can open a shared quiz link.

- ☐ 3.1 Window B: start **Test - Practice**. Answer question 1, then **reload the page**. — The quiz should continue at question 2 (not restart, not get stuck). Finish all questions, then tap **Try again**. — A fresh attempt should start at question 1.
- ☐ 3.2 Window A: open the Practice results and tap **Release to students**. Window B: refresh your quiz list. — The Practice card should now have a **View results** button showing your score and the correct answers.
- ☐ 3.3 Window B: open **My Quizzes**, tap **New**, add one question, and tap **Share** to get a link. Copy it into Window A and play it to the end. — The last question should still show whether you were right, and you should reach the end screen.
- ☐ 3.4 Window B: tap **New code**, confirm. Open the OLD link again in Window A. — The old link should now show a plain “this link is not valid” page (NOT the quiz). Then tap **Unshare** and open the NEW link — it should show the same plain page.
- ☐ 3.5 If your lead asked for a share link for the automatic check: share one quiz again and SEND the new link to your lead. Do not unshare it.

Phase 4 — Register your face (student window, 5 min) ★

Quick check

Window B only (camera must be allowed there).

- ☐ 4.1 Open **Face setup** (from the menu). Tick the consent box FIRST. — The camera should only start AFTER you tick consent.
- ☐ 4.2 Follow the instructions: look **front**, then **left**, then **right**, and **blink** when asked. — You should see “Enrolled successfully”. Open the page again — it should remember you are enrolled.
- ☐ 4.3 Window A: open the class and check the student list. — Your enrollment should be visible, with NO photos of your face shown anywhere.

Phase 5 — Sit the exam with the camera on (both windows, 20 min) ★

Quick check

The exam runs in Window B with the camera ON. Keep Window A ready — you will switch to it (Alt+Tab) for the lecturer actions.

- ☐ 5.1 Window B: start **Test - Exam**. Tap **Begin**, then **blink** and **turn your head** when asked. Answer one question by clicking. — The exam should start, and answers should save WITHOUT showing whether you were right.
- ☐ 5.2 Wrong-face test: hold the other person's face photo (phone screen, brightness up) in front of the camera for about 10 seconds. No photo? Fallback: look fully away from the screen and cover the camera for about 15 seconds. — The exam should PAUSE and offer recovery. Show your own face again, tap **Blink to recover** and blink — the exam should continue and answers should work again.

- ❑ 5.3 Repeat step 5.2 until the exam says it is **flagged**. Try **Blink to recover** again. — Recovery should now be REFUSED. Switch to Window A: open the results, find your row, tap **Unlock** (you must type a reason). Back in Window B — the exam should continue. Window A should show a note that an unlock happened.
- ❑ 5.4 Answer the multi-select question (tick the answers) and TYPE an answer for the short question. — The short answer should show a “waiting for marking” label (it is marked later, not now).
- ❑ 5.5 Tap **Skip** on one question. — The question should stay skipped; you should NOT be able to answer it afterwards.
- ❑ 5.6 Hand gestures: tap **Continue** on the gesture panel (or Skip if you prefer clicks). Hold up **2 fingers** to answer one question, then show an **open palm** to move on. Then cover the camera for about 12 seconds. — The finger answer should save once; the palm should move you on; covering the camera should pause the exam, and blinking should recover it.
- ❑ 5.7 Cheat checks (30 seconds): try to COPY the question text (Ctrl+C), and press **Esc** to leave full screen. — Copying should be BLOCKED, and leaving full screen should pause the exam (not flag it).
- ❑ 5.8 Tap **Submit**. — You should see “Submitted — results will be released by your lecturer” with NO score shown yet.

Phase 6 — Marking, results and Excel (lecturer, 10 min) ★

Quick check

Window A only (peek at Window B where told).

- ❑ 6.1 Open the **Results** page for **Test - Exam**. — You should see one row per student with scores, pause counts, and a face-check timeline.
- ❑ 6.2 Open the **Question insights** section. — You should see per-question success rates and answer bars. Then click the student's paused/flagged row to expand it. — A short **incident video** should play with a reason and length shown. (A student with a clean exam would have no video — that is correct and private by design.)
- ❑ 6.3 Wait 1–2 minutes, then refresh. The typed short answer should change from “waiting” to a mark. Open it and tap **Change mark**: first try saving with NO mark and a 2-letter reason. — It should REFUSE without saving. Now pick a mark, type a proper reason, save. — The student's total should update immediately.
- ❑ 6.4 Tap **Release to students** and confirm. Switch to Window B. — You should now see the score with per-question answers, and BOTH windows should get a bell notification that opens the results.
- ❑ 6.5 Tap **Export Excel** and open the file in Excel / Sheets. — The file should be named like the quiz plus today's date, with Results, Answer Key and Distribution sheets, green/red answer cells, and a row for every student. Then open the class **Gradebook** and its export too. — Scores, averages and released/unreleased markers should all be there.

Phase 7 — Quick checks (5 min) ★

Quick check

Either window unless stated.

- ❑ 7.1 Tap the **language button** (EN/BM) on the login page and inside the app, then reload. — Everything should switch language and STAY switched. You should never see raw text like “nav.home”.

- ☐ 7.2 Open your **account menu** (top-right avatar) and tap the **theme button** a few times, then reload. — Light/dark mode should switch and stay switched; everything should stay readable.
- ☐ 7.3 In the account menu, upload a **profile photo**, then remove it. — The photo should change and then clear.
- ☐ 7.4 Phone check. Have your phone? Open the site on it, use the bottom tabs, open the account panel and the bell. No phone? Drag Window B narrow (about phone-width) instead. — Everything should fit with NO sideways scrolling.
- ☐ 7.5 Window B: paste a lecturer page address into the address bar (ask your lead for one). — You should be sent back to the student pages automatically.
- ☐ 7.6 Only if your lead asks: test the **Microsoft sign-in** button once, and the **Forgot password** email once. Never run these repeatedly.

Phase 8 — Clean up (lecturer, 5 min)

- ☐ 8.1 Window A: **Close** both Test quizzes, then **Archive** the **Test** class. Window B: refresh. — The class and its quizzes should DISAPPEAR for the student. Window A: **Restore** the class — everything should come back. (Your lead will tell you whether to leave it restored or archived — write your choice in the sign-off below.)
- ☐ 8.2 Delete any throwaway test quizzes that nobody started. — They should disappear. Quizzes WITH student attempts can never be deleted — leave those alone.
- ☐ 8.3 Glance at the results pages once more. — Every flag, video and mark you see should match a step you did above. Anything you cannot explain is a bug — write it down.

If something looks wrong

Do not try to fix it. Just capture it: **step number** (for example 5.3), **what you expected, what actually happened**, and a **screenshot** (Windows key + Shift + S, then paste into a message to your lead). Add each problem to the sign-off sheet below.

Sign-off
