Easy2U user manual

English internal edition • 25 September 2026. These instructions and screenshots were checked against the current source and a local release build with synthetic accounts. Live camera and assessment recovery, institution support details, and first-time reader testing require further review before public distribution.

Choose the guide for your role:

- [Student guide](#) — join a class, take or recover a quiz, see results, and create personal practice quizzes.
- [Lecturer guide](#) — create classes and quizzes, publish, review attempts, release results, and export reports.
- [During a quiz: quick help](#) — fast recovery steps when a student is paused or cannot submit.
- [Troubleshooting](#) — find a symptom and its next step.
- [Terms used in this manual](#) — meanings of assessment, reveal, attempt, and other labels.
- [Get more help](#) — what to report and who can resolve it.

Student quick start

1. [Create your account or sign in.](#)
2. [Join your lecturer's class.](#)
3. [Find a class quiz.](#)
4. If the assessment requires it, [set up your face](#) and follow the start instructions.
5. [Answer and submit.](#)
6. [Check your result](#) once it is available.

Lecturer quick start

1. [Create your lecturer account or sign in.](#)
2. [Create a class and share its join code.](#)
3. [Create a quiz and add questions.](#)
4. [Check and publish the quiz.](#)
5. [Monitor attempts and release results.](#)

Using the manual on a phone

Easy2U uses top navigation on a desktop and a bottom dock on a phone. Some lecturer tools use sheets or compact lists on a phone. The guides label steps **Desktop** and **Phone** wherever the action changes. Close the on-screen keyboard if the bottom dock is temporarily hidden.

Before you start

Use the account and class details supplied by your institution or lecturer. Assessments that require face verification need a working camera, camera permission, and a well-lit space. Some options, including Microsoft sign-in, AI question generation, web topic search, and hand gestures, appear only when your institution or lecturer enables them.

This searchable website is the primary manual. [Download the English internal PDF](#) for printing or offline use. It is generated from the same content. See the [change log](#) for the app version and capture date.

Student guide

Use this guide for class assessments and personal practice. A **class quiz** is assigned by a lecturer and may be a practice quiz or an assessment. A **personal quiz** is yours to create and practice; it is not class work and does not produce a class grade. A class quiz marked **Live** is available subject to its schedule and attempt rules. **Draft** quizzes are not available to students; **Closed** quizzes cannot be started.

Create an account or sign in

Where to go: Open your institution's Easy2U address and choose **Create account** or **Sign in**. You need internet access and an email address. Use an institutional Microsoft account only if that option is offered by your institution.

Create a student account

1. Open **Create account**.
2. Enter your **Full name**, **Email address**, and **Password**. The form requires a password of at least six characters.
3. Under **I am a...**, choose **Student** and enter your **Matric number**. The form describes the expected matric format.
4. Read **Biometric Consent**, including its notice that camera/microphone footage before an integrity incident may be recorded and reviewed. Select **I understand and consent to face verification for assessments** only if you agree. This account consent is required to create an account; face capture is a separate step described below.
5. Select **Create account**. If the app asks you to confirm your email, follow the email instructions, then return to **Sign in**. Otherwise, the app signs you in and opens **My Classes**.

What happens next: Your account's student role opens the student area. If you arrived through a class QR code, the app should return you to the class join confirmation after registration/sign-in.

If it does not work: Check the displayed form error and correct the field it names. If an institution requires a matric number during a later sign-in flow, complete that prompt. See [Troubleshooting](#).

Sign in, reset a password, or sign out

1. Open **Sign in** and enter **Email address** and **Password**.
2. If your institution offers a Microsoft sign-in option, select it and complete the provider's prompts. This option is institution-dependent and may not appear.
3. If a matric capture prompt appears for your institutional account, enter the matric number requested and submit it once. This is an account setup step; the application returns you to the page you were trying to open when possible.
4. To reset a forgotten password, select **Forgot password?**, enter your email, and select **Send reset link**. Open the message sent to that address and use its link to set a new password. The confirmation

message is generic whether or not an account exists.

5. To sign out, open the account menu and choose **Sign out**.

What happens next: A successful student sign-in opens **My Classes**, unless you followed a QR/share link that returns you to its destination.

If it does not work: Check that the email and password are correct. If the reset email does not arrive, check spam and verify the address; contact your institution's account administrator if you cannot access that mailbox. Do not repeatedly guess a password. See [Troubleshooting](#).

The image shows a sign-in interface for Easy2U. At the top center is the 'E2 Easy2U' logo. In the top right corner, there is a language selector button with a globe icon and the text 'EN'. The main sign-in form is a white card with an orange border. It has a heading 'Welcome back!' followed by the text 'Sign in to your Easy2U account to manage classes, take quizzes, and track your progress.' Below this are two input fields: 'Email address' with the placeholder 'you@example.com' and 'Password' with a masked password '*****' and an eye icon to toggle visibility. A 'Forgot password?' link is located below the password field. At the bottom of the form is a large orange 'Sign in' button. Below the button is a link that says 'Don't have an account? Create one now'. To the right of the sign-in form is a large orange circle containing a white stylized 'E' logo. The background is a light orange color with some abstract shapes.

Figure 1. Use the links below the sign-in form to create an account or recover a password.

Find your way around

Desktop — different navigation. Use the top navigation: **My Classes**, **Class Quizzes**, **My Quizzes**, and **Face Setup**. Open the account control to see account information and **Sign out**. The bell opens notifications; its badge shows how many are unread. Select a notification to open its related page and mark it read, or select **Mark all as read**. The language control switches between **EN** and **BM**. The theme control cycles through **Light**, **Dark**, and **System**.

Phone — different navigation. Use the bottom navigation to open **My Classes**, **Class Quizzes**, **My Quizzes**, or **Face Setup**. The header keeps the brand, notification bell, and account avatar; select the avatar for the account sheet. Language and theme controls are in that sheet and work the same way as on desktop. The notification badge shows unread items; opening a notification marks it read.

Figure 2. On phones, the bottom navigation gives you the four student areas.

What happens next: **My Classes** is the place to join a class; **Class Quizzes** lists available class quizzes; **My Quizzes** is for personal practice quizzes.

Join a class

Where to go: Sign in, then open **My Classes**. Get the six-character join code or class QR from your lecturer. You must be signed in as a student.

Figure 3. Desktop: select a class card to open its quizzes, or use Join a class to enter a code.

Join with a code

1. **Desktop:** Select **Join a class** on the classes page. **Phone:** Select the floating **Join a class** control on **My Classes**; it opens a bottom drawer. If you have not joined any class yet, select **Enter a join code**.
2. Enter the six-character code in **Join code**. The entry accepts uppercase letters and numbers; codes exclude ambiguous characters.
3. Select **Join class**.

Figure 4. Desktop: enter the six characters in the join dialog, then select Join class.

Figure 5. Phone: the same code entry opens in a bottom drawer.

What happens next: A success notice names the class, and the class appears under **My Classes**. Selecting its class card opens the class-filtered quiz list.

Join from a QR code

1. Scan the QR code your lecturer provides with your phone camera. The code opens the class confirmation page.
2. If asked, sign in or create a student account. The app returns to the pending join confirmation.
3. Check the class join code shown on screen, then select **Join class**.

What happens next: The app confirms the join and returns to **My Classes**. Scanning alone does not join you; confirm the action on the page.

If it does not work: Check all six characters with your lecturer. A code may be invalid or for an archived class; repeated incorrect attempts may temporarily lock joining. If you already joined, the app reports that state. See [Troubleshooting](#).

Find a class quiz

Where to go: Open **Class Quizzes**. To focus on one class, select its card from **My Classes**; the quiz list is then filtered to that class. A quiz must be live and within its availability window.

Figure 6. Class quiz cards identify the mode and show the available action or current status.

1. Find the quiz by its title. Read its mode, due/deadline information if shown, time limit, and attempt status before starting.
2. Treat **Practice** as practice feedback and **Assessment** as graded class work. Correct answers may be hidden for an assessment until the lecturer releases results.
3. If the quiz is scheduled, wait until its opening time. If it is closed or the deadline has passed, contact the lecturer about availability.
4. Select **Start** to begin, or use the available resume/retake action shown on the quiz card. Retakes appear only when the lecturer has allowed them and attempts remain.

Phone: The same quiz states and actions appear in the compact list. Select the **Remove class filter** control when a class filter is active to return to all class quizzes.

Figure 7. Phone: use the bottom navigation to return to Class Quizzes, then select the action on the quiz card.

What happens next: The quiz player opens. For an assessment, follow [Set up face verification](#) if required and then [Take and submit an assessment](#).

If it does not work: “Not open” means the scheduled window has not begun; “window closed” means it has ended. If the card says **Awaiting results**, the lecturer has not released your result yet. See [Troubleshooting](#).

Set up face verification

Where to go: Open **Face Setup** from the top or bottom navigation, or select **Enroll your face** on the class quiz page. Some assessments require face verification; your lecturer or institution may configure different checks.

Figure 8. Read the consent information before deciding whether to grant face verification consent. The camera stays off until you consent.

1. Read **Biometric Consent**. Select **I understand and consent to face verification for assessments** only if you agree to the described camera and face processing. The camera remains off until you grant consent.
2. Allow camera access when your browser asks. Use a working front-facing camera in a well-lit place. Close other apps or tabs using the camera.
3. Center one face in the guide. Follow the on-screen instruction to blink and turn your head to the front, left, and right positions. Wait for each angle to complete before moving to the next.
4. Wait for the result. The status may say enrollment succeeded or that it is pending review. Pending review is a normal review state, not an accusation; wait for the review to complete before starting an assessment that requires enrollment.
5. If already enrolled, the page shows that status and offers **Re-capture**. Use it if your appearance or enrollment needs updating. **Revoke Biometric Consent** withdraws consent and can make face-required assessments unavailable until setup is completed again.

Phone: The page uses the phone camera and shows the pose/lighting status below the video. Keep the browser page in the foreground while capturing.

What happens next: Return to **Class Quizzes** and start the assessment. If review is pending, wait and check again.

If it does not work: For denied permission, change the browser's camera permission for Easy2U, return to the page, and select **Retry**. If there is no camera, another app is using it, the page is not secure, the room is dim, no face is detected, or multiple faces are visible, address that condition and select **Try again**. Do not

try to bypass verification. If capture repeatedly fails or enrollment remains pending, contact your lecturer. See [Troubleshooting](#).

Take and submit an assessment

Where to go: Open **Class Quizzes**, choose a live **Assessment**, and select **Start**. Read the instructions before beginning. A camera/liveness check or fullscreen prompt may appear depending on the quiz and institution settings.

The screenshot displays a desktop assessment interface with a light orange background. At the top left, a green pill-shaped button labeled "Practice" is visible. To its right, the text "Practice: Data Structures Basics" is shown in a bold, dark font. Further right, a progress indicator shows "Q 1/4" with a small orange bar below it. Below the title, a pill-shaped button labeled "Multiple Choice" is present. The main question text reads: "You are lining up for lunch. Which data structure models this – first person in line is served first?". Below the question, there are four answer cards, each with a letter in a circle and a text label: "A Stack", "B Queue", "C Tree", and "D Graph". Each card has a small yellow thumbs-up icon on the right side. At the bottom right of the interface, there is a pill-shaped button labeled "Skip this question". At the very bottom center, small text reads "Gestures unavailable — click to answer".

Figure 9. Desktop answer controls: this practice example shows the question, answer cards, progress, and Skip this question. An assessment may add a face gate and timer.

Figure 10. Phone answer controls: answer cards stack vertically, and Quiz Info appears above progress. This is a practice example; an assessment may add checks.

1. At the assessment gate, allow camera access if asked. Center your face and follow the blink instruction. If the app asks for fullscreen, accept the browser prompt. Select **Begin assessment** when it becomes available.
2. Read the question and its answer format. For a single-choice or true/false question, select one answer. For a multiple-select question, select every response you intend to submit, then select **Confirm answer** (or use the hand confirmation if it is enabled). For a short-text question, enter your response and select **Submit answer**.
3. Select **Next** after answering to continue. To leave a question unanswered, select **Skip this question**, then select **Next** (or **Finish** on the last question). A skipped question is recorded as unanswered and counts as zero; you cannot change it after advancing.
4. If hand gestures are enabled, hold the indicated hand pose steady and use the on-screen confirmation to choose or confirm an answer. If gestures are disabled, use the displayed answer and confirmation

controls.

5. Watch the timer if one is shown. When finished, select **Finish**. A timer may submit automatically when it expires. Do not close the tab before the completion screen appears.

Phone: Keep the quiz page visible. Browser camera/fullscreen prompts can cover the page; answer those prompts to continue. Use the on-screen controls by touch. The assessment gate may ask you to select **Begin assessment** after the face check; quiz controls use the same labels as desktop.

What happens next: The player displays an assessment completion/submission state. Results may remain hidden until the lecturer reveals them. If the connection drops or the page reloads, return to **Class Quizzes** and use the card's resume action if one is available; do not assume unsent answers were saved.

If it does not work: Follow [Recover during a quiz](#) and the [During the quiz quick card](#). See also [Troubleshooting](#).

Recover during a quiz

Where to go: Stay on the quiz page and read the pause or warning overlay. A temporary pause is a protection/recovery state and does not by itself mean your attempt was flagged.

1. Follow the message on the overlay. If it asks you to verify your face, center your face and blink when prompted.
2. If the camera stopped, restore the browser's camera permission, close any other app using the camera, and use the displayed retry/recovery action.
3. If the page lost focus or fullscreen, return to the quiz tab and re-enter fullscreen if prompted.
4. If the overlay says to wait for your lecturer to unlock the attempt, contact the lecturer and give them the quiz title and approximate time of the pause. Do not start a second attempt unless the quiz card explicitly offers a retake.
5. When the player resumes, check the question and timer. The app may save answers as you go, but do not assume an answer was saved if the connection failed before the player acknowledged it.

Phone: Keep the quiz page in the foreground; close notifications or other apps that take over the screen. Re-allow camera access in the browser if needed.

What happens next: A successful recovery returns you to the quiz or assessment gate. For a timed assessment, the countdown pauses during the recovery pause and resumes afterward.

If it does not work: Do not repeatedly reload or attempt to bypass the gate. Note the message and time, then ask your lecturer to inspect or unlock the attempt. See [Troubleshooting](#).

For a compact recovery reference, open the [During the quiz card](#).

See your results

Where to go: Open **Class Quizzes** and find the completed quiz.

1. If the card says **Awaiting results**, the lecturer has not revealed the result. You cannot open a score yet; check later or contact the lecturer if the release date has passed.
2. After release, select **View results** on the quiz card. The player results screen shows your score and, when enabled, question review/feedback.
3. For practice quizzes, feedback may appear immediately after completion. Use the review displayed by the player.

Phone: Use **Class Quizzes** in the bottom navigation. The same **Awaiting results** and **View results** states are available in the compact list.

What happens next: The result remains available from the quiz card while the quiz and account remain available.

If it does not work: If the result is still awaiting release, ask your lecturer when it will be available. If the quiz is missing, check that you joined the correct class and remove any active class filter. See [Troubleshooting](#).

Make a personal practice quiz

Where to go: Open **My Quizzes**. Personal quizzes belong to your account and are for practice; they do not count as class assessment results.

Figure 11. Your personal practice quizzes appear under My Practice Quizzes.

1. Select **Create quiz**, enter a **Title**, then select **Create quiz** again to make the quiz.

2. In the editor, enter the question prompt and answer choices or response details for the question type shown. Choose the correct answer when that option is provided.
3. Select **Add this question**. Repeat for more questions. Use the editor's controls to edit, reorder, or delete questions; attach an image only if the image control is available.
4. If AI question generation is offered, review every generated question and answer before using it. Availability depends on institution configuration.
5. Return to the quiz list and select **Start** or the preview/play action to practice.

Phone: Open **My Quizzes** from the bottom navigation. The editor uses compact controls and opens question entry in a sheet. Follow the visible save/add controls.

What happens next: Your quiz appears in **My Quizzes** and can be played as personal practice.

If it does not work: Check required title, prompt, and answer fields. If an image or AI option is absent, it may not be enabled for your account. See [Troubleshooting](#).

Share or stop sharing a personal quiz

Where to go: Open **My Quizzes** and choose **Share** on the quiz you own.

1. Copy the displayed share link and send it to the intended recipient yourself. Anyone with an active share code may be able to open the practice content; share it accordingly.
2. To invalidate the current link, select **New code**, then **Confirm**. Give recipients the new link. The old link becomes unavailable.
3. To stop sharing, select **Stop sharing**. The old link becomes unavailable. A recipient already playing may lose access to questions/feedback as the quiz is unshared.
4. A recipient opens the shared link. If prompted, they sign in or create an account, then reopen the link and select **Start practice**.

Phone: Open **My Quizzes** in the bottom navigation and use the quiz's **Share** action. The share dialog is responsive; follow the displayed controls.

What happens next: A valid link opens the community-made practice quiz. A revoked, rotated, invalid, or unavailable code shows an unavailable message.

If it does not work: Confirm you copied the full current link and that the owner has not rotated the code or stopped sharing. Ask the owner for a fresh link. See [Troubleshooting](#).

Lecturer guide

English internal edition. See the [manual home](#) for the quick start and [Troubleshooting](#) for common problems.

This guide covers classes, quiz authoring, assessment monitoring, results, and reports. An institution may disable AI generation or web search. Those options appear here only when they are available in your account.

Sign in as a lecturer

You need: a lecturer account, or a lecturer invite code supplied by your institution. A student account does not gain lecturer access by changing its profile.

1. On **Sign in**, enter your **Email address** and **Password**, then select **Sign in**. If your institution offers it, you can select **Sign in with Microsoft** instead.
2. To make a new lecturer account, select **Create one now**, enter your name, email and password, select **Lecturer** under **I am a...**, and enter the **Lecturer invite code** supplied by your administrator.
3. Select **Create account**. If the app asks you to confirm your email, open the confirmation message before signing in.

What happens next: you reach your lecturer dashboard, starting at **My Classes**. If you are sent to the student area, [get help](#) with your role or invite code.

If it does not work: select **Forgot password?** on the sign-in page, or use [sign-in troubleshooting](#).

Find your way around

Desktop: use **My Classes** and **Quizzes** in the top navigation. The notification bell and account menu are in the header.

Phone: use the bottom dock for classes and quizzes. On **My Classes**, use **New Class** to create a class; the center **Create** control opens choices for a new class or quiz. Open the account sheet for language, theme and sign-out options. The dock can hide while the on-screen keyboard is open; close the keyboard to see it again.

Figure 1. Desktop: use the top navigation. The Create a class form is on My Classes.

Figure 2. Phone: use New Class on this page or the center Create control in the bottom dock.

The **Quizzes** library shows quizzes from all of your classes, including quizzes in archived classes. Search by title there. Open a draft in the builder or select **Results** for a published quiz.

Create a class and invite students

You need: a lecturer account. A class gets its own six-character join code when you create it.

1. Open **My Classes**.
2. **Desktop:** in **Create a class**, enter a **Class title** and select **Create class**. **Phone:** select **Create** > **New class**, enter the title in the sheet, and select **Create class**.
3. Open the new class card. Find its **Class Join Code**.
4. Select **Copy join code** to send the code through your usual course channel. For students in the room, select **Show QR** and let them scan it. A student who is signed out is sent through sign-in and then

returns to the join confirmation.

5. Ask students to confirm the class name and join. Open the class **Students** tab or roster section to check enrollment.

Figure 3. Phone class detail: the sample code illustrates where to find yours. Use Show QR for students in the room; switch to Students to inspect the roster.

What happens next: the class is listed under **My Classes** and you can create quizzes in it. Do not send the code to someone who should not join.

If it does not work: check the class title and connection, then see [class and join troubleshooting](#).

Review the class roster

1. Open **My Classes**, then open the class.

2. **Desktop:** find the **Students** section or tab. **Phone:** select the **Students** tab to switch from class quizzes to the roster.
3. Check the student names and matric numbers shown there. For a large class, a notice may say only the first 100 students are listed; other enrolled students still count toward quizzes and exports.

For a student who cannot join, confirm you shared this class's current code and that the class is active. The [student join guide](#) can be sent to them.

Archive or restore a class

Archiving hides a class from students and stops new joins while preserving quizzes, results and audit history. Restoring makes its live quizzes available again. Confirm with your institution before archiving a class still in use.

1. Open the class from **My Classes** and select **Archive class**.
2. Read **Archive this class?**, then select **Archive class** to confirm.
3. To restore it, open **Archived classes**, find the class, select **Restore**, and confirm **Restore class**.

What happens next: the restored class returns to **My Classes**. If it had live quizzes, check their schedule and availability before telling students to resume.

Create a quiz

You need: an active class. Decide whether students need repeat practice with immediate feedback or a controlled assessment.

1. Open **My Classes** and choose the class. Select **New Quiz** or find **Create a new quiz**. From the **Quizzes** library, you can also start **New quiz** and choose a destination class.
2. Enter the **Quiz title** and choose **Quiz mode**: **Practice** permits repeat attempts and immediate feedback; **Assessment** uses controlled attempts and may require face verification.
3. For an assessment, set **Time limit** if needed. Leave **No time limit** when there is no countdown.
4. Optionally set **Opens at** and **Closes at**. The form labels these times in Malaysia time. The closing time must follow the opening time.
5. If appropriate, turn on **Allow retakes** and choose **Max attempts**. Review **Shuffle question & option order** and **Hand gestures** before publishing; those draft settings cannot be changed once the quiz is live.
6. Select **Create quiz** to open its draft builder.

What happens next: the quiz is a **draft**, hidden from students until you publish it. A live quiz can still be unavailable before its opening time or after its closing time. See [quiz states](#).

If it does not work: verify the class is active and that the closing time follows the opening time. See [quiz troubleshooting](#).

Add and edit questions

1. Open the draft quiz's builder and find **Add question**. **Phone:** use the builder's add-question control to open its sheet.
2. Select **Question type**: **Multiple choice**, **True / False**, **Multiple select**, or **Short answer (AI-marked)**.
3. Enter the **Question prompt**. For option-based questions, enter distinct options and mark the **Correct answer** or **Correct answers**. For a short answer, provide a clear **Answer key / rubric** for the marker.
4. Add an optional explanation or question image, then select **Add this question**. Review the new item in **Questions**.
5. Use **Edit**, **Move up**, **Move down**, or **Delete** on a draft question as needed. **Phone:** expand the compact question controls if the actions are not visible immediately.

The screenshot displays the 'Add question' interface in the Easy2U Desktop Quiz Builder. At the top, the navigation bar shows 'Easy2U', 'My Classes', and 'Quizzes'. The main header indicates the current quiz is 'Draft: Graph Theory (WIP)' with 2 questions. Below this, there are buttons for 'Generate from file', 'Import questions', and 'Duplicate'. The 'Add question' section is the primary focus, featuring a form with the following elements:

- Question type:** A dropdown menu currently set to 'Multiple Choice'.
- Correct answer:** A dropdown menu currently set to 'Option 1'.
- Question prompt:** A text area containing the prompt 'What is the primary advantage of...'.
- Image upload:** A dashed box area with a camera icon and the text 'Drag & drop, or browse' and 'PNG, JPEG or WebP • up to 5 MB'.
- Options:** A list of options, with 'Option 1' selected and marked as the correct answer with a green checkmark.

Figure 4. Desktop builder: choose the question type and correct answer, then enter the prompt and options.

Figure 5. Phone builder: Add question opens a sheet with the same fields. Scroll within the sheet to finish the form.

The builder accepts at most 30 questions in a quiz. Multiple-choice options are limited, and multiple-select has a smaller option cap. Follow the form's validation message if it rejects a question. Hand gestures may be unavailable for some question types or when **Hand gestures** is off; students can use the offered keyboard or tap controls.

What happens next: the draft remains editable. Before publishing, check each answer key and explanation. Deleting a question also removes its image and cannot be undone.

Import several questions

1. In a draft builder, select **Import questions**.
2. Paste a pipe-separated **Question list**, or select **Upload file** for a .txt or .csv text file.
3. Follow the example in the dialog to mark the correct answer with *. Check **Preview** and correct every line-level warning.

4. Select **Import questions** when the preview shows the intended items.

Import adds to the existing draft. It does not replace it. The dialog shows the remaining slots up to the 30-question limit. If you need to change an imported item, use **Edit** in the builder.

Generate questions with AI, when available

AI output is a draft. You are responsible for checking wording, answer keys, images and suitability for your class before publication.

1. In a draft builder, select **Generate from file**. Choose **Upload Documents** for supported files or **Paste Notes** for text. The dialog accepts PDF, DOCX, PPTX, TXT, MD and supported image files; it shows the current per-file and total limits.
2. For an image or scanned PDF, choose the available **Document Scanner**. Select **Read Files & Continue** or **Continue with Text** and inspect the extracted content. If pages were missed, correct that before generating.
3. Choose the number of questions, difficulty, format and quiz language. Use **Custom AI Focus & Directives** for topic guidance. If offered, **Add up-to-date web knowledge** searches for extra material in addition to your upload or notes.
4. Choose **Add to existing questions** or **Replace all existing questions**. Replacing removes the current draft questions. Confirm that choice before selecting **Generate quiz**.
5. Wait for **Generation complete**, then select **Review questions**. Correct mistakes in the builder; use **Regenerate with AI** on an individual question only when needed.

What happens next: questions are saved to the draft, not automatically published. The builder may mark generated questions **To review**; use that filter and **Mark checked** as you verify them.

If it does not work: use the dialog's retry or scanner choice, try a smaller or clearer source, or add questions manually. See [AI and import troubleshooting](#).

Duplicate a quiz

1. Open the quiz builder and select **Duplicate**. The action may be under **More actions** on a narrow screen.
2. Choose an active **Destination class** and select **Duplicate**.
3. Select **Open draft** to review the new copy before publishing it.

The copy includes questions, settings and images, but does not copy student attempts or results. The destination cannot be an archived class.

Publish and manage a quiz

Only a draft with at least one question can be published. Publishing makes it live, but an opening time can still prevent students from starting yet.

1. In the draft builder, review every question and its answer key. Check **Quiz settings**, including mode, time limit, schedule, retakes, shuffling and hand gestures.
2. Select **Publish quiz** and wait for the **Live** status.

3. Open **Results** to monitor attempts. If you set an availability window, check its **Opens at** and **Closes at** values before sharing the quiz.

Figure 6. Phone publishing: check the question list, then use Publish quiz at the bottom of the builder.

What happens next: enrolled students can see the live quiz. They can start only while it is open and they have an available attempt.

Change a live quiz's availability

Some live settings, including the availability window and retakes, can be managed after publication. Question text, answer keys, shuffling and the gesture setting are draft-only. Use **Edit settings** or the schedule control where the quiz shows it, save the permitted changes, and confirm what the student quiz card now says.

Close a quiz

Closing is one-way. Students cannot start new attempts or answer more questions; a student already taking it can still submit recorded work. You may have to decide whether to reveal existing results as part of closing.

1. Open the live quiz's builder or **Results** and select **Close quiz**.
2. Read **Close this quiz?**, including any warning about submitted students whose results remain hidden.
3. Choose **Reveal first, then close** if it is offered and you want students to see their results, or choose **Close anyway** to leave results hidden.

What happens next: the status becomes **Closed**. You cannot return it to Live. Check [Release results](#) if students are waiting for scores.

Review attempts and help students

Open the class quiz and select **Results**. The **Quiz Results & Integrity** page groups sessions as **Completed**, **Flagged**, **Abandoned**, or **In progress**. Select a student's row to inspect their session, answer breakdown, and **Integrity timeline**. An event is a signal to review in context; it is not by itself a final judgment about a student.

Desktop: use the results table and row actions. **Phone:** use the compact status filters and open the student's detail or **Session actions** menu.

The screenshot displays the 'Weekly Quiz 3 – Sorting (closed)' results page in the Easy2U interface. The top navigation bar includes 'Easy2U', 'My Classes', and 'Quizzes' tabs. Below the navigation, there's a 'Back to class' link and an 'Export Excel' button. The main heading is 'Weekly Quiz 3 – Sorting (closed)' with a subtext 'Assessment · Closed · 7m · 3 questions'. There are two filters: 'All 5' and 'Completed 5'. A green banner states 'Results revealed' with the note 'Students can now view their scores and answer breakdowns.' Below this is a 'Question insights' section with a bar chart icon and the text 'Some questions look like a teaching gap — see the highlighted rows.' The 'Student Attendance & Sessions' section lists three students: Muhammad Danish (MD), Nur Aisyah (NA), and Lim Wei Jian (LW). Each student's entry shows their status (Completed), start and end times, and a 'View Answers' button. The scores are 3/3 for the first two and 2/3 for the last.

Figure 7. Results: filter sessions, open a student's answers, and use Question insights for patterns across the class.

Review a pending face enrollment

A panel on **My Classes** can list students whose face enrollment needs a decision. Until reviewed, they cannot start a verified assessment.

1. Open **My Classes** and find the **face enrollments need review** panel.
2. Check the student and class using your institution's normal identity process. Select **Approve** if the enrollment is correct, or **Reject — ask to re-enroll** if the student must capture again.
3. Tell the student the outcome through the usual class channel.

If you cannot establish the student's identity, contact your institution's administrator before approving.

Unlock, exempt, or reset an attempt

These are different actions. Choose the least disruptive one that addresses the student's situation.

Action	Effect
Unlock	Lets a flagged student continue after your review.
Face-exempt	Stops face checks for this one attempt. You must record a reason.
Reset	Permanently deletes this attempt's answers, progress and integrity details. It permits the student to start again and cannot be undone.

1. On **Results**, find the student's session and read the status and **Integrity timeline**.
2. Open **Session actions** if the buttons are in a menu. Select **Unlock**, **Face-exempt**, or **Reset** as appropriate.
3. For **Face-exempt**, enter the required **Reason**. For **Reset**, read the confirmation carefully before completing it.
4. Refresh your view of the student's session, then tell the student what to do next. Do not tell them to start a second attempt unless the resulting status allows it.

If it does not work: see [attempt troubleshooting](#) or [get more help](#).

Review and adjust a short-answer mark

AI-marked short answers may show **Pending**, **Needs review**, or **Marking failed**. Inspect the student's answer and rubric before releasing results.

1. Open **Results**, select the student's session, and locate the short-answer question.
2. Compare the response, **Rubric**, and any **AI rationale**. Select **Adjust mark** when a correction is needed.
3. Choose the permitted **New mark**, enter a **Reason**, and save.

If results were already released, follow the page's prompt to republish the corrected mark so students see the change.

Release and analyze results

Assessment scores can be visible to lecturers before students see them. Students see a score and answer review only after the results are released. Practice quizzes give more immediate feedback. Some assessments can be set to release automatically once the completion conditions are met.

Reveal assessment results

1. Open the assessment's **Results** page and check completed attempts and any **Pending** or **Needs review** marks.
2. Read the **Results are hidden** panel. Select **Reveal to students** when the results are ready, then confirm.
3. Check that the page says **Results revealed**. Students can then open their scores and answer breakdowns.

Revealing is a one-way release. If you later correct a short-answer mark, follow the republish instruction on the student's session detail.

Inspect question insights

On **Results**, open **Question insights**. Compare the per-question correct rate and option choices to find questions students struggled with. A highlight such as **Only ...% correct** is a prompt to review the teaching or question wording, not a diagnosis on its own. The page will warn you if its analysis was truncated for a very large class.

Open and export the gradebook

1. Open **My Classes**, choose the class, and select **Gradebook**.
2. **Desktop**: scan the student-by-assessment table, then search, filter, or sort. **Phone**: scan the student list; select a student or quiz to open its bottom sheet. Only published assessments appear in the gradebook.
3. Select **Export Excel** to download the class workbook. Keep it in an institution-approved location because it contains student information.

Figure 8. Desktop gradebook: compare assessment columns and student rows; Export Excel is above the table.

Figure 9. Phone gradebook: select a student in the list to open their assessment breakdown.

For one quiz, select **Export Excel** on that quiz's **Results** page. The quiz export and class gradebook export are different reports. An **unrevealed** marker means the lecturer can see the score while students cannot yet see it.

If it does not work: review filters, the roster and quiz status, then see [export troubleshooting](#).

Notifications and account

Use the notification bell for updates such as a student attempt, flagged session, or enrollment needing review. Open a notice to reach its relevant class or quiz. In the account menu, switch **Language** or **Theme**, or select **Sign out**. On a phone, these settings appear in the account sheet.

For a missing control, a code that does not work, or a failed export, start with [Troubleshooting](#). If the issue persists, use [Get more help](#).

During the quiz

Keep the quiz page open and follow the message shown in the player. A pause is a recovery state; it does not by itself mean your attempt has been flagged. Use this quick card if a check interrupts an assessment.

What you see	What to do
Face check paused or a blink prompt	Keep your face in the camera frame and blink when asked. Wait for the check to recover before answering.
Hands left the camera	Show your hand in the camera view, then blink to continue.
Return to the exam	Select Return to the exam to bring the quiz back to the foreground. Keep it open while answering.
Fullscreen was closed	Select Return to the exam . The quiz should continue where you left off.
Camera unavailable	Restore camera permission for Easy2U in your browser, close other apps using the camera, then follow the player prompt.
Assessment flagged or lecturer unlock required	Wait for your lecturer to review and unlock the attempt. Contact them with the quiz title and approximate time; do not start another attempt unless the quiz offers one.
Answer recording timed out or failed	Tap/click that answer again when the player asks you to retry. Check for the Answer recorded confirmation before moving on.
Submission timed out or failed	Keep the quiz page open and select Retry submit . Wait for the completion screen before leaving.
Timer reaches zero	The quiz submits automatically. Wait for the completion screen.

For a face pause, the timed assessment countdown stops while the session is paused and resumes after recovery. Other quiz rules, including attempt limits and result release, are controlled by the lecturer.

If the page has reloaded or the connection has dropped, return to **Class Quizzes** and use the resume action if the quiz card offers one. Do not assume an answer was saved unless the player acknowledged it. For a pause that remains locked or a submission that still fails, contact your lecturer and use [Student troubleshooting](#).

Troubleshooting

Use the closest symptom below. Keep the quiz page open during an assessment problem when possible. For issues that need staff access, contact your lecturer first; see [Support](#) for what to include and where to escalate.

Account and sign-in

I cannot create an account

Check that **Email** is valid, the password has at least six characters, a student role is selected, and the requested **Matric number** is filled in. The registration form requires the biometric consent checkbox before **Create account** is enabled. Read the consent information before selecting it. If a field is rejected, correct it and submit again. If the same error persists, contact your institution's account administrator.

The app says the email or password is invalid

Check the spelling and sign-in method. If you use institutional Microsoft sign-in, choose that option when it is offered. Select **Forgot password?** to request a reset link, then check the email inbox and spam folder. The reset confirmation is generic by design. If you cannot access your email or the reset link has expired, contact the institution's account administrator.

I am asked for a matric number

Complete the one-time matric capture prompt for your institutional account. If the value is rejected, check the institution's expected format and contact its account administrator. Do not create a second account to work around the prompt.

A QR join link sends me to sign in and I do not return to the class

Finish sign-in or registration in the same browser. Open the QR link again if necessary, review the displayed class code, then explicitly confirm the join. A QR scan only opens the confirmation page; it does not enroll you automatically.

Class joining

The join code is rejected

Check that it has six characters and compare it with the lecturer's current code. Codes can be invalid or for an archived class. If several incorrect attempts have triggered a temporary lock, wait for the lock to expire and ask the lecturer to confirm the code. Do not keep guessing.

The app says I already joined

Open **My Classes** and look for the class. Select its card to view quizzes. If it is not present after refreshing the page, sign out and back in once; then contact the lecturer with the class name.

I joined, but cannot find a quiz

Open **Class Quizzes**, clear a class filter if one is active, and confirm the quiz is live and within its availability window. Draft quizzes are not visible to students. Ask the lecturer whether the quiz has been published and whether your class is enrolled.

Face setup and camera

The camera permission was denied

Open the browser's site settings for Easy2U, allow camera access, return to **Face Setup**, and select **Retry**. On a phone, also check the operating system camera permission for the browser.

The camera is unavailable or busy

Close video calls and other apps/tabs using the camera. Check that the device has a working camera, then select **Retry**. If the browser says the page is not secure or cannot use the camera, open the institution's approved Easy2U address and contact the administrator if the issue continues.

Face capture does not progress

Use a brighter, evenly lit place; position one face in the guide; remove obstructions; and follow the blink and head-turn instruction for each pose. Make sure no other person is in frame. Retry once the on-screen guidance indicates a centered face and suitable lighting.

My enrollment says pending review

This is a normal review state, not an accusation. Wait for the lecturer or reviewer to complete the check, then revisit **Face Setup**. If an assessment is due before the review finishes, contact the lecturer and explain that your enrollment is pending. Do not attempt to bypass verification.

Face setup succeeded, but the assessment still blocks me

Return to **Face Setup** and check its current status. A pending review or withdrawn biometric consent can block a face-required assessment. Complete the stated setup/review step. If your status is enrolled and the quiz still blocks you, contact the lecturer with the quiz title and exact message.

Class quizzes and results

The quiz says it is not open yet

Check the opening time shown on the quiz and try again after it begins. Confirm your device date/time is correct. If the displayed time has passed, ask the lecturer to verify the quiz schedule.

The quiz says the window has closed

The availability period has ended. Contact the lecturer to ask whether the quiz can be reopened; students cannot change the window.

I already attempted the quiz or cannot retake it

The attempt limit and retake setting are controlled by the lecturer. Return to the quiz card and use **Resume**, **Start**, or **View results** only when that action is shown. Ask the lecturer if you believe the attempt was interrupted or recorded incorrectly.

My result says “Awaiting results”

The quiz was submitted but the lecturer has not released results. Check again later or ask when results will be available. You cannot access hidden scores from the student view before release.

I cannot find “View results”

Confirm the lecturer has released results and that the quiz card shows the released state. Clear any class filter and verify you are in the correct class. If the quiz remains missing, contact the lecturer.

Paused or interrupted assessment

A pause overlay asks me to verify my face

Stay on the quiz page, center your face, and follow the blink instruction. Keep the camera available and wait for the recovery control/state. A pause is a recovery state; it does not by itself mean you have been accused of misconduct.

The camera stopped during the assessment

Restore the Easy2U browser camera permission, close any other app using it, and use the retry/recovery action shown on the overlay. Keep the page open. Contact your lecturer if it does not resume.

The app says I left the tab or fullscreen

Return to the quiz tab and accept the fullscreen prompt if shown. Keep the page in the foreground. If the app asks the lecturer to unlock the attempt, contact them with the quiz title and approximate pause time.

The page reloaded, browser closed, or connection dropped

Reopen **Class Quizzes** and check whether the card offers a resume action. An answer is not guaranteed saved if the player did not acknowledge it before the interruption. Avoid starting a new attempt unless the card offers it or your lecturer advises you to.

Submission failed or the timer expired

Keep the player open and use an on-screen retry if one appears. Wait for a completion/submission state, then check the quiz card. A timed attempt may submit automatically at expiry. If there is no completion state or the recorded status looks wrong, contact the lecturer promptly with the time and error text.

A gesture or focus warning keeps appearing

Follow the on-screen instructions and keep your hand/face visible if those checks are enabled. Use a normal answer control only if the interface offers it. If you cannot operate the quiz, contact the lecturer; do not attempt to disable or bypass checks.

Personal quizzes and sharing

I cannot create or edit a personal quiz

Check required title, prompt, and answer fields, then retry the visible save/add action. AI generation and image options depend on institution configuration. If your quiz is missing from **My Quizzes** after a refresh, contact support using [Support](#).

A shared quiz link says it is invalid or unavailable

Ask the owner for the current link. They may have rotated the code, stopped sharing, or deleted the quiz. A previous link will not work after rotation or revocation. Sign in if prompted, then reopen the current link.

A shared quiz stopped working while I was playing

The owner may have stopped sharing during your attempt. Ask them for a new link if they intend to share it again. Answers or feedback may no longer be available after access is revoked.

Classes and join codes

I created a class, but students cannot join

Open **My Classes** and check that the class is active. From its detail page, select **Copy join code** or **Show QR** and share the current code or link. An archived class cannot accept new joins. If students see a temporary lockout, they should wait for the displayed interval rather than keep trying codes. Send them the [student join steps](#).

A student is missing from the roster

Confirm that the student joined this class, not another class with a similar name. On a phone, select the **Students** tab in class detail. If a large class shows a truncation notice, only the first 100 students are listed, but other enrolled students still count toward quizzes and exports. Check the gradebook or contact [Support](#) if the enrollment is disputed.

Quiz creation and publishing

Publish quiz is unavailable

Open the draft in the builder and add at least one valid question. Check each question's prompt, options or rubric, and answer key. A class must be active to accept a new quiz. Review any validation message and retry the visible **Publish quiz** action.

Students cannot see or start a published quiz

Check that the status is **Live**, the student belongs to the class, and the **Opens at** and **Closes at** times permit a start. A live quiz can be scheduled for later or past its closing time. If the class is archived, restore it only after checking whether its live quizzes should reopen.

I closed a quiz by mistake

Closing is one-way. Do not promise students that it can be returned to Live. Review the submitted attempts and results, then use your institution's support route for the next course action. A duplicate creates a fresh draft, but it does not carry student attempts or results.

Assessment attempts and face checks

A student is flagged or cannot resume

Open the quiz's **Results**, find the student's session, and read its status and **Integrity timeline**. Decide whether **Unlock** is appropriate. If a camera issue prevents checks, consider **Face-exempt** for that attempt and record the required reason. Do not **Reset** unless you intend to permanently delete that attempt's answers, progress and integrity details.

Face enrollment needs review

On **My Classes**, inspect the pending enrollment panel. Use your normal identity-check process before selecting **Approve** or **Reject — ask to re-enroll**. A rejection asks the student to capture again. If you cannot establish the identity, use [Support](#) rather than guessing.

A result is missing or still hidden from students

Check that the student's attempt is completed. Inspect **Pending** or **Needs review** short answers before releasing marks. On **Results**, **Results are hidden** means students cannot yet see scores. Select **Reveal to students** only when the assessment is ready. An **unrevealed** marker in the gradebook is expected before release.

AI import and export

Import questions reports a line error

Return to **Bulk import questions**, check the line named in the message, and correct its pipe-separated format and * answer marker. Confirm the preview and that the draft has enough of its 30 question slots remaining. Only .txt and .csv files load through this import dialog.

AI generation or document scanning fails

Review the file type and size shown in **Generate quiz from file**. Check the extracted-content preview before continuing. For scanned material, switch to an available scanner or retry the pages the dialog names. If a generation was cancelled, nothing was saved; if it says questions were saved but the review screen failed, reopen the builder. You can add questions manually while a configured AI service is unavailable.

Export Excel fails or appears incomplete

Check whether you are on the quiz's **Results** page or the class **Gradebook**; they produce different reports. Retry once if the page reports a temporary export error. If a gradebook shows a row, column or session truncation notice, read that notice before interpreting the file. Store any downloaded report in an institution-approved location and use [Support](#) if exports continue to fail.

Phone layout

I cannot see the bottom navigation

Close the on-screen keyboard. The bottom dock hides while a text field is active so it does not cover the form. If you are taking an assessment, use the quiz's own navigation controls; the usual app dock is absent in the focused quiz player.

The lecturer gradebook looks different on my phone

The desktop gradebook is a student-by-quiz table. On a phone it becomes a student list with a sheet for one student or quiz at a time. Select a student or quiz to inspect its details, then close the sheet to return to the list.

A quiz-builder control is missing on my phone

Use the builder's add-question control to open its sheet, or expand a question's compact controls. Some actions are under **More actions**. If a control remains inaccessible after closing the keyboard, report the device, browser, screen width and control name through [Support](#).

Escalation

Contact your lecturer for class membership, quiz schedules, face review, attempt pauses/unlocks, retakes, and result release. Contact your institution's account administrator for sign-in, matric, institutional Microsoft sign-in, or camera/security configuration problems. If neither can resolve an app failure, use the student route in [Support](#). Include the exact message, quiz/class title, device/browser, and approximate time; never send your password, share code, or face image in a support report.

Terms used in this manual

Term	Meaning
Class	A lecturer's group of students and its assigned quizzes.
Join code / QR	A way to enter a class. The lecturer shares the six-character code or displays its QR link.
Draft	A quiz the lecturer can edit; students cannot start it.
Live	A published quiz. Opening and closing times may still limit when a student can start.
Closed	A quiz that no longer accepts new attempts. Closing is one-way.
Practice quiz	A class quiz with repeat attempts and immediate feedback, or a separate personal quiz made by a student. The guide identifies which kind it means.
Assessment	A class quiz whose attempt, verification, score release, and possible time limit are controlled by the lecturer's settings.
Attempt	One student's run through a class quiz. A retake is a new attempt when the lecturer allows one.
Face enrollment	The student's one-time camera setup for verified assessments.
Pause	A temporary stop that asks the student to follow an on-screen recovery step.
Flagged	An attempt that needs lecturer review before the student can continue.
Face exemption	A lecturer decision to stop face checks for one student's attempt, with a recorded reason.
Reset	A lecturer action that permanently deletes an attempt's answers, progress, and integrity details so the student can start over.
Reveal / release results	The point when the lecturer makes assessment scores and answer breakdowns visible to students.
Shared personal quiz	A student's unlisted practice quiz opened by a share link. Recipients must sign in; the owner does not see who played.

Get more help

Internal edition: use your existing class and institution IT channels. Add the actual helpdesk contact and lecturer communication channel before public distribution.

First, search [Troubleshooting](#). If you are in an active quiz, use [During a quiz: quick help](#).

Students

Contact your lecturer through the class's usual communication channel when the problem involves a join code, a missing class quiz, availability, an assessment pause or flag, a result that has not been released, or permission to retry. Your lecturer can inspect the attempt and decide whether an unlock, face exemption, or reset is appropriate.

For account access, institutional Microsoft sign-in, or a matric-number correction, use your institution's account or IT support channel. A lecturer may refer you to that channel if the issue is outside the class.

Lecturers

Use your institution's application or IT support channel for invite-code, account, AI service, camera-service, or repeated export failures. Student attempt actions remain in the quiz's Results page.

What to include in a report

- Your role (student or lecturer), device type, browser, and whether you used English or Bahasa Melayu.
- The class or quiz title, approximate time, and the exact on-screen message.
- What you were trying to do and which documented recovery steps you tried.

Never send a password, lecturer invite code, matric number, face photo, incident video, or a downloaded gradebook in an ordinary support message. If a screenshot is requested, remove private information before sending it.

Manual change log

English internal edition — 2026-09-25

- App package version: 0.1.0; capture commit: a0da26137f1046258243681bd1a30de870f00289.
- Added student, lecturer, quick-help, troubleshooting, glossary, and support guides, with current English desktop and phone screenshots made from synthetic accounts.
- Added a searchable static docs site and a tagged, bookmarked English PDF generated from the same source.
- Added numbered captions for every figure, grouped website contents with a phone page outline, and a two-column PDF contents page with chapter numbers.
- Before public distribution: real support contact and docs URL, live camera and assessment-recovery walkthroughs, first-time reader testing, Bahasa Malaysia translation and localized screenshots, and formal PDF accessibility review.

The public edition must state the matching Easy2U release or commit and the date of the final UI walkthrough [here](#).
